Free hosting- normally means:

- Hosting only
- Pay for the domain

Paid hosting includes both of the above

Top 10 hosting providers in Ireland:

Chat now

Providers will send you an email with your log in details

- In the meantime but while you wait they may give you a URL

[Example: http://d1505540.u108.host.ie](http://d1505540.u108.host.ie)

- To access your account with the Control Panel, they give you login details : Example

Login: brma40

Password: 4jp9n16A

Account ID: 1505529

- **The may give you separate details to access your account by FTP, use:**

Host Name: 1015.host.ie

Login: brma40

Password: 4jp9n16A

?	FTP sub-accounts	brma40_brma40

Click into FTP then FTP user and select the little icon here

You can go directly to this webshell FTP client with the following URL

1015.host.ie

select

This is the default H-Sphere server page. From here you are able to access the following services:

Web Utilities:

- WebShell4—file manager

If this page is not what you wanted to get, most probably, one of the one of the following situations occurred:

- Domain name refers to H-Sphere logical server, e.g., **web.service-domain.com**
- Third-level domain name does not exist. Maybe, you typed it incorrectly, e.g., **valed-domain**.example.com instead of **valid-domain**.example.com
- Domain incorrectly points to this H-Sphere server.

? help√ apply

Select the domain that you set up and the one that you want to upload all your files to

If you notice this provider has an images folder. In this example you do not touch any of the other files that you see there e.g cgi etc.

Upload statistic

index.html - uploaded

You will see all your files now on the left hand side

Now lets make a css folder for your css files
Press MKDIR- Mkdir is a command that will make a new file/folder on the server.
If you have a folder created in your website folder then you can usually create the same folder.
That folder will then sit beside the css and images as it would locally on your PC.

file:///testsiteexample.com - dir(s): 3 | file(s): 2

..			
cgi-bin		brma40:brma40	
cp		brma40:brma40	
images		brma40:brma40	
index	html	brma40:brma40	2.17 Kb
robots	txt	brma40:brma40	50 b

Create folder

Location [browse »](#)

Name

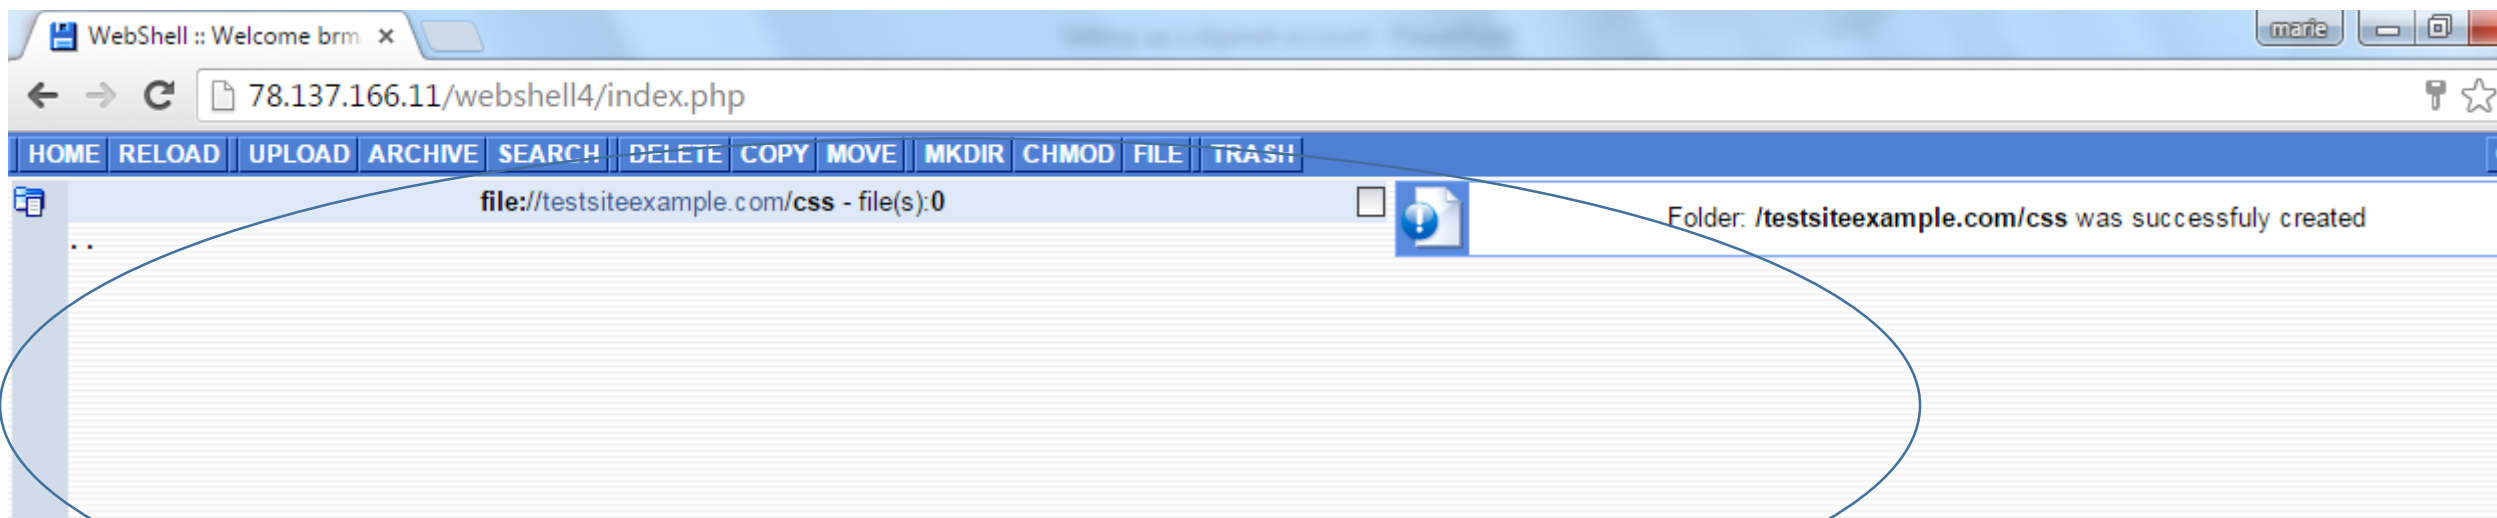

[? help](#) [create »](#)

[Create ...](#)

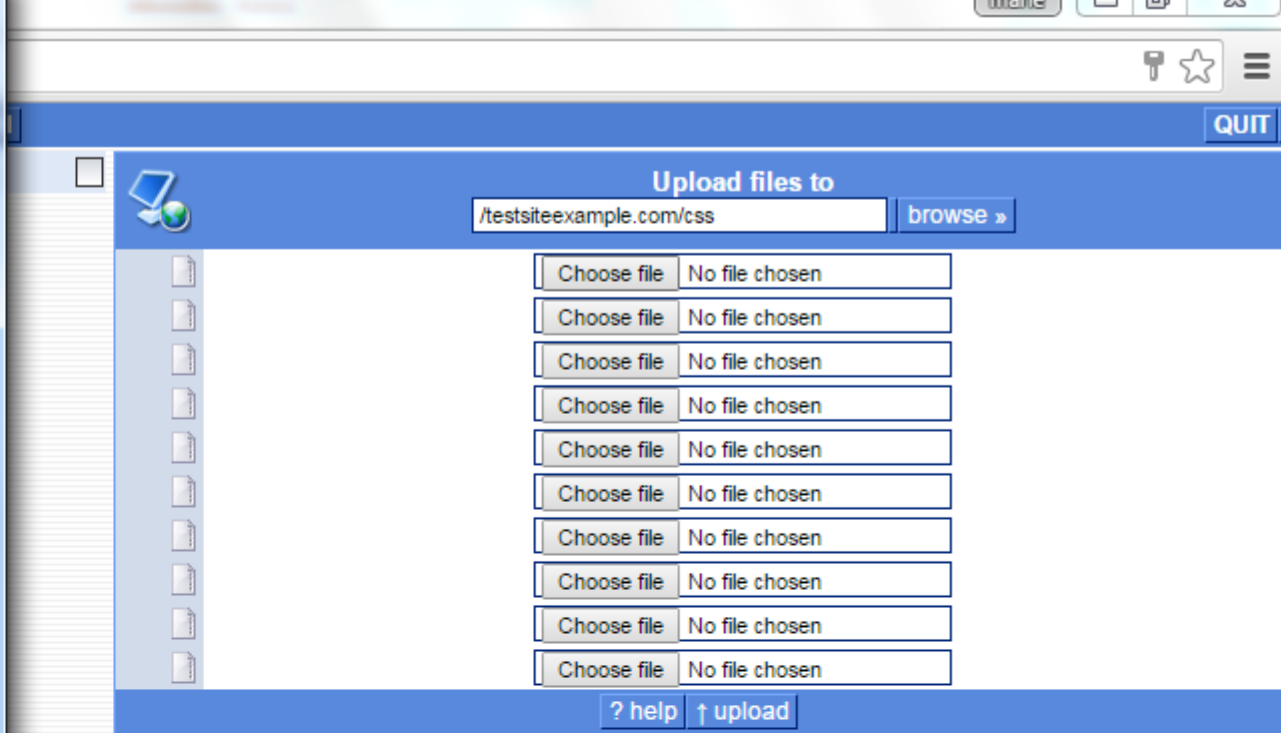

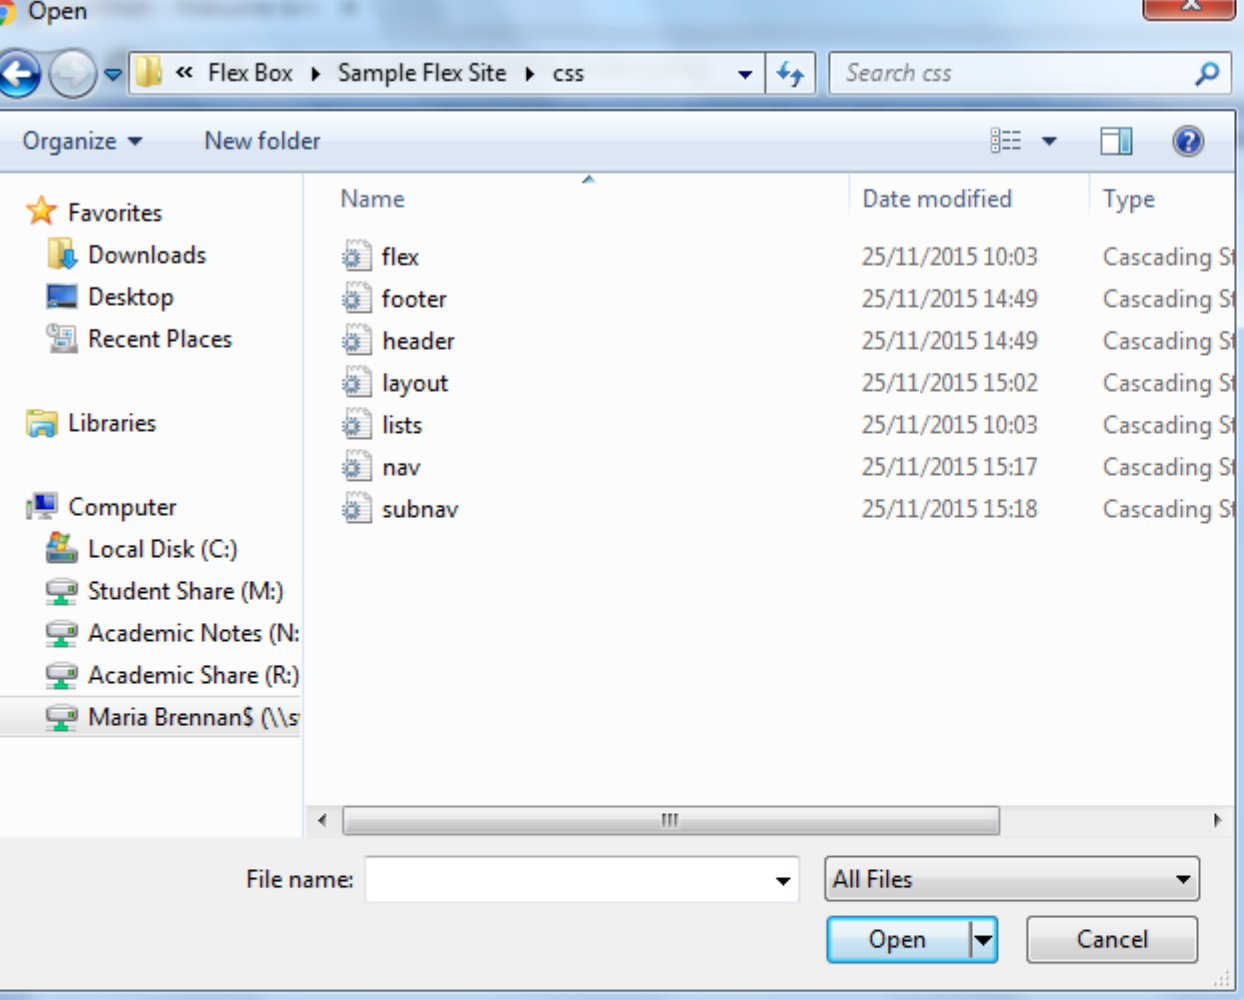

See that you have
now created a
folder for your css
files:

Open the CSS folder

Open the CSS folder

There are no CSS files
in here :
Press upload from the
top menu bar and
upload your CSS files

Make sure to press upload and you will see all your css files on the left hand side

WebShell :: Welcome brm x

78.137.166.11/webshell4/index.php

HOME RELOAD UPLOAD ARCHIVE SEARCH DELETE COPY MOVE MKDIR CHMOD FILE TRASH

file:///testsiteexample.com - dir(s):4 | file(s):2

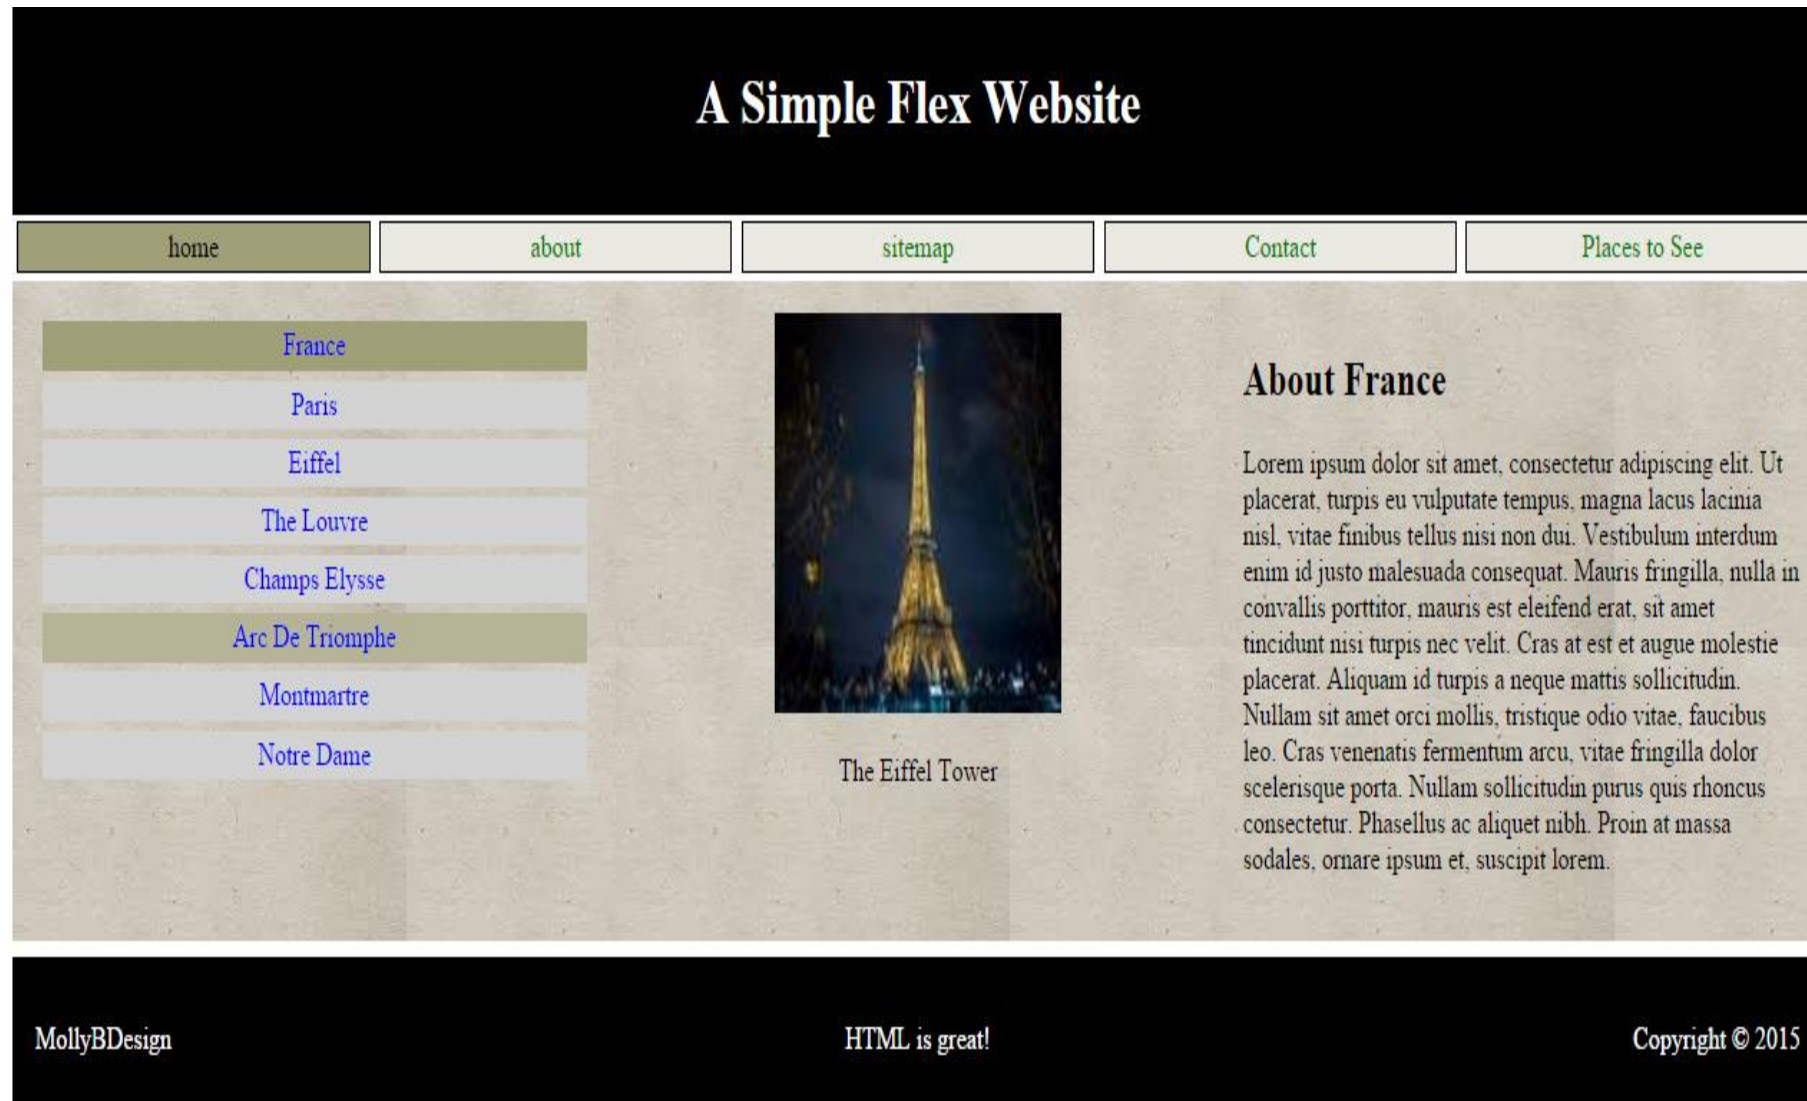

..			
cgi-bin	brma40:brma40		
cp	brma40:brma40		
css	brma40:brma40		
images	brma40:brma40		
index	brma40:brma40	2.17 Kb	
robots	brma40:brma40	50 b	
html			
txt			

Folder: /testsiteexample.com/css was successfully created

Now you can add your images to the images folder

Open the images folder and upload all your images in a similar way as the css file.

Now enter the URL of your site and see your site live:: testexample.com

cPanel

- Most of the top providers use cPanel for file management
- The following link is a snippet of what you can do in the file manager of hostgater.com

<https://www.youtube.com/embed/3a5kRk552lA>
